

Efficient Professional tyre repair

The EZ SEAL brand name has been available for professionals since 1998

The EZ SEAL tyre repair solution is exclusively available for punctures on the tyre thread. EZ SEAL products are produced by experienced manufacturers.

The EZ SEAL range offers both tyre repairs by string and by patch.

The repair using **EZ SEAL string** is designed for punctures made by nails or screws. The object that caused the puncture must still be in place at the time of repair and the tyre must not have been driven on when flat. The EZ SEAL string is inserted into the puncture channel and it seals the damage instantly. It is not necessary to remove the wheel from the car and this repair can be performed anywhere. This repair is made by professionals as a quick repair.

Some country regulations recommend checking the repair from the internal side of the tyre in a garage afterwards.

The EZ SEAL string range is made as self-vulcanizing products: No vulcanizing chemical product is required during the repair process. The EZ SEAL string is made up of strands of tyre cord fibres that are impregnated, strand by strand, with rubber, vulcanizing agents and accelerators. The EZ SEAL self-vulcanizing strings have been tested as safe and reliable by independent testing laboratories.

The **EZ SEAL Patch&Stem** repair should be performed in a garage. The repair procedure using an EZ SEAL Patch&Stem is performed from inside the tyre when the object causing the injury is unknown. The wheel and the tyre are removed. The wheel must be balanced after the repair.

The stem fills the hole of the puncture and the patch seals the internal side around the puncture. The patch is sealed with the EZ SEAL vulcanizing chemical product. This processing time is longer than the one performed by string but it allows a full inspection of the tyre.

The EZ SEAL patch range is available in several sizes in order to repair most types of damage

The EZ SEAL chemical products are provided in a small bottle to avoid wasting the products and money.

The EZ SEAL range of repair products is a cost-effective way to provide reliability, performance and safety on the road.
